PREM GUPTA

SOC Analyst | Cybersecurity | Security Monitoring

+91 95111899958 | premgupta062006@gmail.com | Github | LinkedIn | Mumbai, Maharashtra

ABOUT ME

Cybersecurity-focused BCA student with hands-on experience in Security Operations, SIEM monitoring, threat detection, vulnerability assessment, and security testing through practical projects and virtual labs. Proficient in Splunk, Wireshark, Nmap, Burp Suite, and Linux, with practical exposure to log analysis, attack simulation, incident investigation, and API security scanning. Familiar with MITRE ATT&CK and security incident response workflows. Seeking entry-level opportunities in SOC Operations, Cybersecurity Analysis, Vulnerability Assessment, or Information Security.

TECHNICAL & SOFT SKILLS

Cybersecurity: Security Monitoring, Incident Investigation, Threat Detection, Vulnerability Assessment, Network Security, Log Analysis
SIEM & Monitoring: Splunk Enterprise, Security Event Analysis, Alert Triage
Network Security: TCP/IP, DNS, HTTP/HTTPS, SSH, VPN, NAT, OSI Model, Network Traffic Analysis
Tools: Wireshark, Splunk, Nmap, Burp Suite, Kali Linux, Cisco Packet Tracer, Hydra
Frameworks: MITRE ATT&CK, Cyber Kill Chain
Programming: Python, Bash Scripting, Javascript

PROJECTS

Argus – API Security Scanner

• Developed an automated API security scanner using Python, Flask, React, and Tailwind CSS.
•Implemented 6 security checks based on OWASP API Top 10, including BOLA, Broken Authentication, and Mass Assignment.
• Integrated OpenAPI 3 parsing, real-time scan monitoring, and vulnerability risk scoring.
• Generated JSON and HTML security reports with severity ratings, evidence, and remediation.
Live: Argus-API-Scanner

SOC Home Lab – SSH Brute Force Detection

• Simulated SSH brute-force attacks using Hydra against Ubuntu targets in a controlled SOC lab
• Investigated authentication failures using Linux auth.log and Splunk Enterprise.
• Mapped attack activity to MITRE ATT&CK T1110 (Brute Force).
• Prepared SOC-style incident reports including findings, indicators of compromise, and remediation recommendations.
GitHub: SOC Home Lab

SOC Multi-Stage Attack Detection Lab

• Simulated reconnaissance and brute-force attacks using Nmap and Hydra in a virtual lab
• Investigated network traffic using Wireshark and analyzed Linux authentication logs.
• Identified SYN scans, SSH authentication attempts, and suspicious network activity.
• Documented attack timelines, indicators of compromise, and mitigation recommendations.
GitHub: SOC Multi-stage attack

SOC Alert Simulator | Interactive SOC Training Platform

• Built an interactive SOC Analyst training platform with simulated security alerts.
• Implemented phishing, brute-force, malware, and C2 attack scenarios.
• Enabled alert triage with True Positive, False Positive, Escalate, and Close actions.
• Integrated MITRE ATT&CK mapping and analyst scoring system.
• Generated incident reports based on investigation outcomes

EDUCATION

Bachelor of Computer Applications (BCA)
Somaiya Vidyavihar University
Sem 4 - CGPA: 9.04 , currently in Sem 5

Higher Secondary Certificate (HSC)
CHM College, Ulhasnagar
Percentage: 75%

CERTIFICATES

- Google Cybersecurity Professional Certificate
- AWS Cloud Technical Essentials
- Ethical Hacking Fundamentals
- Introduction to Ethical Hacking Principles
- Introduction to Artificial Intelligence
